

# Mid-Atlantic Industrial Services corp.

**Project:** Conte's Pasta  
**Location:** Vineland, NJ  
**Flooring System:** Urethane Cementitious Flooring  
**Type of Area:** 5,000 sf production floor including a radius cove  
**Results:** The USDA insisted that the production area floors be resurfaced. Due to frequent high temperature washdowns we chose to install Sikafloor PurCem 22N in a brick red color over the entire 5,000 sf production floor including a radius cove around the full perimeter of the room. This was a turn key project that was successfully completed over a 3 day weekend shutdown which minimized the amount of time that Conte's Pasta was out of production.
