

Mid-Atlantic Industrial Services corp.

Project: Sabert, Food Packaging Manufacturer

Location: Sayreville, NJ

Flooring System: Trowel Resurfaced, Stained & Polished

Type of Area: During a 4th of July shutdown consisting of 9 days we blastracked, primed, and trowel applied 65,000 sf of 1/4" thick 100% solids epoxy resurfacer. This work was complicated by the fact that a lot of the work had to be done around existing blowmolding machinery. The plant had to be up and running on the 10th day. A lot of contractors backed off due to the scheduling requirements, however, Mid-Atlantic worked around the clock to a successful completion of this work within the given limits.

Results: Based on that success we were again contracted by Sabert to perform our services at their new facility in 2009/2010. We scrubbed and densified 125,000 sf of new warehouse floor, we applied a 1/4" thick resurfacer in the labs, and then stained and polished the office corridors along with the lobby area. Once this work was completed we then returned to the old building and trowelled the last 15,000 sf of floor with a 1/4" thick resurfacer where they deleted the old office space and turned it into new production areas.
