Sika Industrial Flooring's color selections are available in epoxy, urethane and multi-use color additives as designated here:

<sup>E</sup> These colors are available as an Epoxy Color Additive.

<sup>U</sup> These colors are available as a Urethane Color Additive.

<sup>M</sup> These colors are available as a Multi-Use Color Additive.

\* These colors are former ICS Garland colors.

Because of the limitations of process color printing, the color samples contained herein are close approximations of actual colors and should not be relied upon for true color. Colors show approximate tone without any texture. Final color matching should be made with actual sample of the product and color to be used. Gloss level will vary depending on product used.

Custom colors are available with the Multi-Use Color Additive Technology. Minimum quantities, adequate lead time and up-charges may apply.

For use with compatible Sikafloor® products only. Please consult Sika Industrial Flooring for further information and pricing.
