

# Mid-Atlantic Industrial Services corp.

**Project:** TurboCare Inc.

**Location:** Rural Hall, NC

**Flooring System:** Troweled Epoxy Topping with Decorative Quartz Broadcast

**Type of Area:** Turbo Care is a manufacture of heavy industrial turbines sold to large energy companies throughout the world. The project was a 55 million dollar capital expansion of an existing 25 year old building. The scope of work included 160,000 sq ft of ¼" troweled epoxy topping with decorative quartz broadcast in 22,000 sq ft of aisle ways.

**Results:** The biggest challenge was the 9,000 sq ft chemical containment area. We provided a fiberglass reinforced epoxy novolac in all the pits and trenches to a seamless monolithic surface from the top of the curbing to the floor drains. MAIS was able to keep the project on schedule due to our field supervision and onsite value engineering. We worked closely with Turbo Care's engineering and procurement to keep the project on budget.
